Installing Twilio
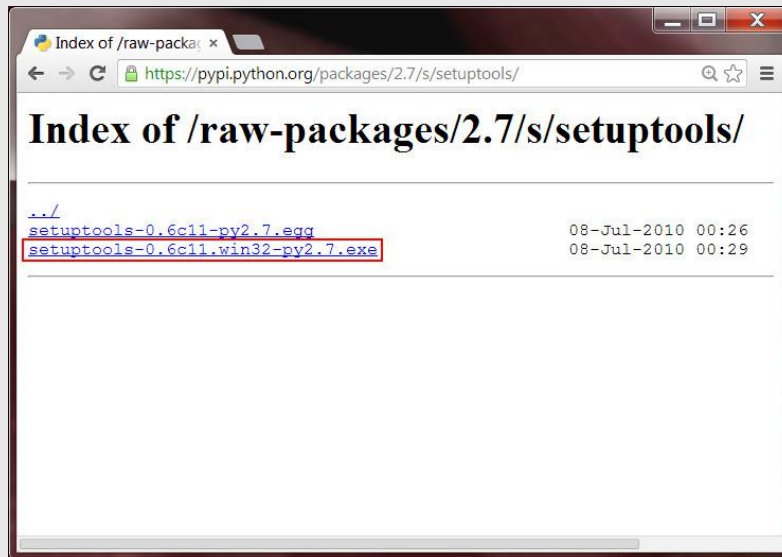

On your Windows Machine (10-15 minutes install time)

Installing Twilio on Windows
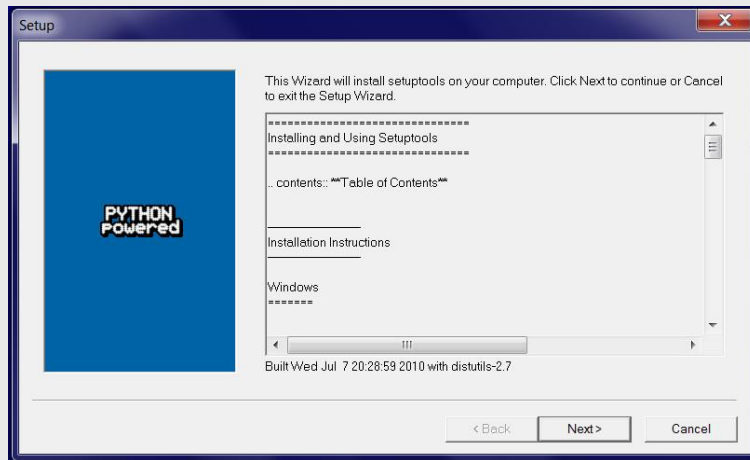

1 First, you need to install setuptools. Navigate to https://pypi.python.org/packages/2.7/s/setuptools/and download "setuptools-0.6c11.win32-py2.7.exe"

2 Once the download is complete, double click the file and follow the installation wizard.

Index of /raw-packages/2.7/s/setuptools/

../
setuptools-0.6c11-py2.7.egg   08-Jul-2010 00:26
setuptools-0.6c11.win32-py2.7.exe   08-Jul-2010 00:29

Installing Twilio on Windows

Now open up Command Prompt by selecting Start > All Programs > Accessories > Command Prompt.

If you are on Windows 8, search for Command Prompt in the app list.

Installing Twilio on Windows

4 Once the command prompt is open you should
see a window like the one to the right.

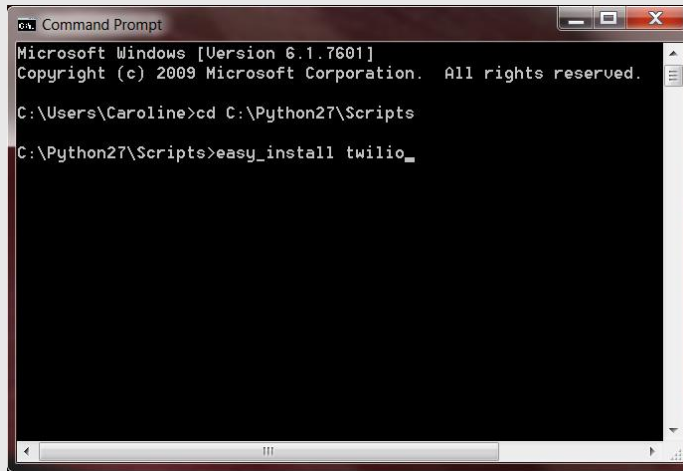

5 In the command prompt enter the command

```
cd C:\Python27\Scripts
```

Installing Twilio on Windows

In the command prompt, enter the command
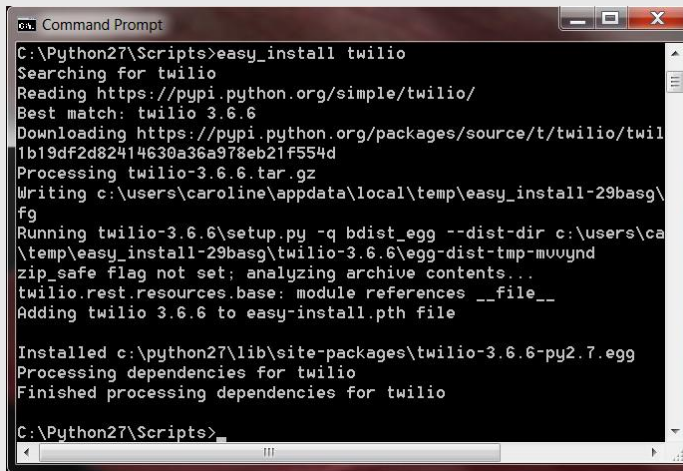

`easy_install twilio`

to install twilio.

Installing Twilio on Windows

7 To confirm your twilio installation, **reopen** IDLE. If IDLE is already open, you need to close and reopen it.
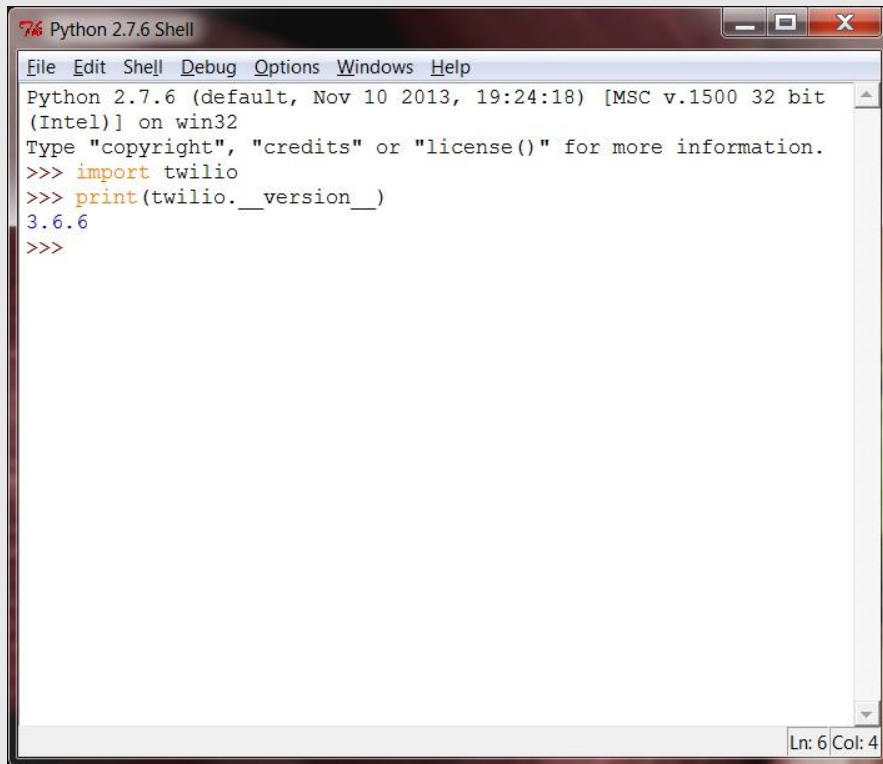

8 Once IDLE is reopened, enter the following commands in the Shell window (in front of the >>> prompt):

```
import twilio
print(twilio.__version__)
```

Note: The second line has two underscores (_), followed by the word version, followed by two more underscores.

If a version number is displayed, the install was successful!

Python 2.7.6 Shell

File Edit Shell Debug Options Windows Help

```
Python 2.7.6 (default, Nov 10 2013, 19:24:18) [MSC v.1500 32 bit
(Intel)] on win32
Type "copyright", "credits" or "license()" for more information.
>>> import twilio
>>> print(twilio.__version__)
3.6.6
>>>
```

Ln: 6 Col: 4

Hooray, you're DONE!

Time for a robot dance party.
